Ingredients: contents of the measuring cap: freeze-dried royal jelly; maltodextrin; anticaking agents: silicon dioxide and magnesium oxide; bulking agent: E460 i. Contents of the micro vial: water; fructose; blueberry (Vaccinium myrtillus L) juice, limpid spray (blueberry, maltodextrin); blueberry (Vaccinium myrtillus L) fresh berries dry extract titrated to 1% in anthocyanin expressed as cyanidin 3-glucoside (blueberry, dextrose); red grapevines (Vitis vinifera L) fresh dry semi-extract titrated to 95% in Procyanidin; water-soluble micronized pollen; acidity regulators: citric acid; sodium lactate solution at 60%; preservative: potassium sorbate; mixed berries aroma; raspberry aroma.

Packaging and Content: pack of 8 single use micro vials in amber PET of 10 ml each with reservoir cap.

Product category: food supplement.

Indications: LIOVITAL mirtillo contains standardized and titrated extracts of Blueberry (fruits) and Red grapevines (seeds) associates to water-soluble micronized pollen and to freeze-dried royal jelly. The Blueberry is useful for the microcirculation efficiency, the pollen and the royal jelly are substances rich of essential amino acids, vitamins and minerals.

Recommended dose: 1 or 2 micro vials per day, based on needs.

Warnings: do not exceed the recommended daily dose. LIOVITAL mirtillo should not be considered as a substitute of a well-balanced and varied diet and to a healthy lifestyle. Keep away from children under three years old.

Storage conditions: store at room temperature (15 – 30°C.) and don’t expose to heat sources. The expiry date refers to the product unopened and correctly stored.

Notice: since the royal jelly is a colloidal and not-soluble substance, the reconstituted micro vial is presented as a lactescent suspension.

Instructions for use: 1) Screw the cap until the seal breaks, so that the powder from the reservoir cap can go in the micro vial. 2) Shake well before use. 3) Un螺丝 the cap. 4) Swallow orally following advices reported on the external packaging. The presence of undissolved corpuscles after the shake, is part of the characteristics of the product, reason for why it should not be considered as a consequence of alteration of the product.
